EXECUTIVE SECRETARY
SHARON HIGBIE

Each year in this decade of the "80's", farming and ranching in Oklahoma becomes more difficult and complicated. Rising production costs and the continued uncertainties of weather add risk and complexity to agriculture as a career and way of life, yet Oklahoma's agriculture continues to be abundant and bountiful. Successful agriculture requires very sound management decisions based on accurate, reliable facts and data.

These figures provide detailed information on Oklahoma's solid contribution to the strength of America; each Oklahoma farm worker now produces enough food for seventy-six people. Taken together Oklahoma farmers have annually produced almost three billion dollars worth of gross farm income in recent years which provides the economic base for many communities throughout the state.

We are indebted to the farmers and ranchers who voluntarily supplied information to the Oklahoma Crop and Livestock Reporting Service and helped insure the accuracy of these data.

Sincerely,

Jack D. Craig
Jack D. Craig
President

STATE DEPARTMENT OF AGRICULTURE
AGRICULTURAL STATISTICS DIVISION

P.O. Box 1095
OKLAHOMA CITY, OKLAHOMA 73101

JOHN E. COCHRANE
STATE STATISTICIAN

JACK D. CRAIG
COMMISSIONER

Presented in this report are measures of Oklahoma's agricultural production. These agricultural statistics are based on survey responses from farmers, ranchers and agri-businesses. We wish to express our appreciation to all of the respondents who voluntarily participated in the sample surveys.

The office staff who prepared these agricultural statistics are John Waldrop, Assistant State Statistician, with Agricultural Statisticians Burton Bartlett, Daryl Brinkman, James Heep, Riley Henderson, Monnie Miller, and Dave Ranek. The program support group includes Sharon Adams, Carol Coon, Charlotte Gamble, Veronica Garcia, Judy King, Beverly Masquat, Teresa Melton, Nancy Parsons, Alberta Penix, Saroja Rathakrishnan, Kathy Sherfield, Ila Mae Spiva and Dora Young.

This publication was assembled under the guidance of Burton Bartlett and assisted by Dora Young.

Current reports and forecasts may be obtained by writing the Commissioner of Agriculture or the State Statistician.

Sincerely,

John E. Cochran
State Statistician

OKLAHOMA CROP AND LIVESTOCK REPORTING SERVICE

SAMPLING METHODS AND ESTIMATION

The data collection program of the Crop and Livestock Reporting Service consists of a series of surveys designed to produce current agricultural statistics of acreages, yield and production of crops, livestock and poultry inventories, and other information pertaining to Oklahoma's agricultural economy.

The most important source of survey data is the farm operator who voluntarily supplies information about his farming operations. Most surveys include a fairly large sample of operators which are surveyed by mail. Some producers may be in a smaller preselected probability sample in which responses are collected by personal interview or by telephone.

Data are also collected from agribusiness firms and merchants serving agriculture. Both suppliers of agricultural inputs and purchasers of raw farm outputs are important sources for developing statistics on agricultural commodities. In addition, these firms can also provide valuable data on quantities marketed or processed, which are used as check data to revise earlier estimates made from sample surveys. Data from these sources are especially useful in the nonprobability mail surveys.

Survey methods have changed significantly during the past two decades and many different sampling and surveying techniques are used currently. Lists of farm operators, including names and addresses, are used for many of the surveys and are well suited for the collection of information by mail. The low cost of data collection from a list sample is one of the principal advantages of this method. Another advantage is the ease with which supplementary information can be included and used to classify operations as to type and size. This allows the use of efficient stratified sample designs.

Today, many probability surveys, using personal interviews and actual field counts to collect data, supplement the mail approach. Enumerative surveys require the collection of survey data pertaining to specific land areas (segments). In Oklahoma, a sample of 360 segments which average approximately one square mile in size are enumerated each year. The information collected is used to supplement mail surveys to provide indications on crop acreages and livestock numbers. Objective counts and measurements are taken each month throughout the growing season from 200 randomly selected wheat yield plots. This information is used to supplement indications of wheat yield provided by the mail responses from monthly crop reporters. The enumerative and objective yield field activities are conducted by approximately 40 part-time enumerators whose work helps provide information for preparing more reliable statistics.

Beginning in 1981, Oklahoma has been participating in a research project called AGRISTARS. This project is designed to determine if satellite information can be used to improve the precision of crop estimates at the state, crop reporting district and county levels. Another goal is to develop methods which will give early warning to the agriculture industry of changes in crop conditions that may affect production. The project is a cooperative effort of the U. S. Departments of Agriculture, Commerce and Interior, NASA, and the Agency for International Development.

John Waldrop,
Assistant State Statistician

U.S. CENSUS OF AGRICULTURE - OKLAHOMA FARM DATA IN BRIEF

I T E M	1969	1974 ^{1/}	1978
<u>Land Utilization</u>			
Total Land Area Acres	44,020,800	44,020,800	44,021,760

OKLAHOMA CROP—WEATHER SUMMARY

 Crop
Reporting
Board
Oklahoma
Crop and Livestock
Reporting Service

1982 CROP WEATHER REVIEW

January: Below normal temperatures were the rule during the month with generally light precipitation. Wheat and oats were in good to fair condition while winter barley was in only fair to good condition. Short subsoil moisture and cold temperatures held small grains dormant across the State. Reports of widespread wheat rust and scattered greenbug infestations were received throughout the month. Livestock remained in good condition with very few health problems reported.

February: Cold, wet weather during the first half of the month improved soil moisture conditions but was extremely hard on newborn calves. Warmer temperatures during the last half of the month enabled most of the crop acreage to break dormancy and resume growing. Top dressing picked up momentum during the last week to 10 days of the month. Warmer temperatures caused cheat, mustard, and wild buckwheat to become problems in the northwestern third of the State.

March: Warmer temperatures enabled wheat and other small grains to make excellent growth and development. Greenbug infestations were reported in several scattered localities with control measures initiated. Growth of cheat and mustard in the North Central and Panhandle caused many wheat acres to be grazed out. Cattle were in generally good condition and only minor parasitic activity was reported. Calving losses and health problems were reported as a result of severely cold February weather.

April: Precipitation and temperatures were generally below normal causing concern among Oklahoma wheat farmers. Row crop preparation and planting were ahead of average but slightly behind the previous year's pace. Livestock were mostly in good condition although forage growth was limited. Pest infestations were on the upsurge in many areas.

May: Record monthly rainfall caused considerable crop damage in some low-lying areas around rivers and creeks. Wheat growth benefitted from the showers but dry, open weather was desperately needed to ripen wheat and to allow harvest to begin. Wet fields also prevented row crop plantings. Parasite activity was observed in the north, but cattle remained in mostly good condition with good gains reported.

June: Rain-soaked fields continued to delay the 1982 small grain harvest. Many western areas submitted reports of low-test weights and general crop deterioration. Weeds presented a problem in some North Central and Northeast fields. Prolonged rains continued to hinder planting of summer field crops. Plagued with excess moisture, some cotton farmers were considering planting sorghum and soybeans as alternative crops. Despite the continuing bleak weather, growing crops were in good condition. Pastures and ranges flourished due to cool temperatures and adequate moisture as over 95 percent of the State's pastureland was rated in good to excellent condition. Small grasshoppers plagued farmland in central localities and mosquitos were proliferating in the east.

July: Heavy rainfall the two previous months set crop progress back by up to two to three weeks. The abnormally late wheat harvest was nearly complete by mid-month. Counties which were behind in harvesting were mostly concentrated in the north and east where weeds and moist soils hampered combining. Some wet, overly matured fields were abandoned in the South Central. Some late-planted cotton, peanuts, and sorghum were not sown until early July. An open fall was essential for these row crops to mature and yield well. Pastures and ranges were green and growing throughout the month.

August: Hot, dry weather replaced wet conditions of the three previous months. Row crops which were well behind in development last month experienced exceptional growth. By the end of the month, many growing crops were in dire need of moisture. Pasture and range conditions declined somewhat but were still very good for August.

September: Dry weather during the month aided corn and sorghum harvest but hindered growth and development of late planted row crops. Temperatures were favorable for small grain plantings but dry weather held back seedings. Late planted row crops were suffering from lack of sufficient moisture and a long "Indian summer" was needed for them to develop fully. Pastures and ranges slipped to fair condition during the month.

October: Lack of rain aided harvesting of some row crops but delayed small grain plantings and late row crop development. A killing frost in the Panhandle late in the month removed moisture from sorghum plants allowing harvesting activities to increase slightly ahead of the previous year's schedule. Cotton producers in southwestern Oklahoma were still awaiting a hard frost to defoliate cotton plants. Pasture and range supplies continued to dwindle as only 65 percent of the counties reported adequate forage.

November: Wheat fields suffering from dry winds recuperated somewhat due to month-end rains. Prospects for wheat pasture improved somewhat but additional moisture was needed. Some western Oklahoma fields with poor stands required reseeding. All row crops, except cotton, were over 90 percent harvested by the end of the month. Cattle and other livestock were in mostly good condition.

December: Slow, soaking rains improved the outlook for Oklahoma's wheat pasture. A few western counties, however, continued to report short subsoil moisture, particularly in the Panhandle. In the major cattle-producing areas, additional moisture was needed to provide adequate pasture growth to support livestock. Cotton harvest continued to progress slowly and was only 80 percent complete by January 1. Cattle were in good condition and fall calving was essentially complete.

OKLAHOMA CROP PRODUCTION

1982 CROP PRODUCTION

The crop production picture for 1982 was mixed. A blend of a record wheat harvest coupled with a disappointing late-season harvest characterized the year. Substantially more wheat and rye acreage was combined in 1982. Cotton and sorghum plantings, however, were reduced considerably. Crop yields were generally above average for small grains and less than average for late-season crops. Rains during the small grain harvest and extremely dry weather during late-season crop development reduced yields to lower than anticipated levels.

The 1982 wheat production, at a record 227.7 million bushels, was almost a third above 1981 and 5 percent above the previous record high 216.6 million bushels produced in 1979. A combination of a record high 6.9 million acres harvested and a better than average 33 bushel per acre yield provided this result. Eight million acres of wheat were planted.

The trend in declining acreage for rye, barley, and oats continued in 1982. Rye seedings were down 13 percent while oat and barley acreage were down slightly over 20 percent. Only 440,000 acres were seeded to these small grains in 1982, compared with over one million acres ten years ago.

The most significant acreage changes were in cotton and sorghum. Near record rainfall during May continued heavy into late June. This resulted in many producers not completing planting intentions. In many cases, alternate crops such as soybeans were planted.

Cotton and sorghum acreages were down 26 and 14 percent respectively while soybean acreage increased 7 percent. Cotton yielded an average of 254 pounds per acre, sorghum 39 bushels per acre, and soybeans 19 bushels per acre.

Peanut production was also affected by the adverse weather in 1982. Eighty-six thousand acres were harvested compared with 91,000 the previous year. Yield, at 2,030 pounds per acre, compares with 2,080 in 1981. Total production was 175 million pounds compared with 189 million in 1981.

Hay production diminished in 1982 due partially to weather conditions. In addition, with hay stocks at high levels, producers did not need as much hay. Hay production totaled 3.2 million tons.

The pecan and peach crops suffered because of a late spring frost. The stress of the bumper crops of 1981 also contributed to the smaller crops. Peach production totaled 9 million pounds and pecan production totaled only 2 million pounds.

OKLAHOMA LIVESTOCK - JANUARY 1, 1983

Oklahoma's cattle and calf inventory on January 1, 1983, decreased moderately, marking the end of the upward trend in the current cattle cycle. Annual average prices received in 1982 for all livestock categories increased from a year earlier. Compared to a year earlier, 1981 cash receipts increased 17 percent for cattle; but declined 8 percent for sheep and lambs and 12 percent for hogs. As a result, cash receipts from marketings of meat animals continued to decline for the second consecutive year.

Cattle and calves on Oklahoma farms and ranches totaled 5,350,000 head on January 1, 1983, down 8 percent from the previous year. The State's cow inventory totaled 2,250,000 head and was composed of 2,140,000 beef cows and 110,000 milk cows. Beef cow inventory declined 8 percent while milk cows remained the same from a year earlier. The number of calves under 500 pounds was up from January 1, 1982. The average inventory value of \$330 per head gave a total dollar value for all cattle and calves on the State's 66,000 cattle operations of \$1.8 billion, 6 percent below the value a year earlier.

The number of cattle and calves in Oklahoma feedlots on January 1, 1983, was 11 percent above the previous year and 17 percent below the all-time high number on January 1, 1978. Fed cattle marketing during 1982 were 3 percent below a year earlier and 26 percent below the record number marketed in 1978. Cattle and calves placed on feed during the year were up 9 percent from 1981.

Hog numbers continued to decline throughout 1982 and as of December 1, totaled 180,000 head on the State's 6,500 hog operations. Total hog inventory was down 27 percent, breeding stock was down 32 percent, and the number of market hogs was down 25 percent from December 1, 1981. The 1982 pig crop was 38 percent smaller than a year earlier and included 130,000 spring pigs and 128,000 fall pigs. Average value per head of \$81.50 resulted in a total inventory value of \$14.7 million.

Sheep and lamb inventory continued to increase and marked the seventh consecutive year of expansion. Sheep and lambs on Oklahoma's 2,500 sheep farms on January 1, 1983, increased 8 percent from a year earlier and included 95,000 stock sheep and 22,000 sheep and lambs on feed. The 1982 lamb crop of 70,000 head was 1 percent below the previous year. Wool produced during 1982 total 840,000 pounds 17 percent more than the previous year's production. The average value per head of \$64.50 was slightly above January 1, 1982 and resulted in a 12 percent increase in total inventory value for all sheep and lambs.

Riley Henderson
Agricultural Statistician

ALL CATTLE AND CALVES, OKLAHOMA, JANUARY 1, 1983

BEEF COWS, OKLAHOMA, JANUARY 1, 1983

MILK COWS, OKLAHOMA, JANUARY 1, 1983

HOGS AND PIGS, OKLAHOMA, DECEMBER 1, 1982

1982 DAIRY REVIEW

Oklahoma's January 1, 1983 milk cow population totaled 110,000 head, the same as January 1, 1982. Heifers being kept for milk cow replacement totaled 35,000 head, also unchanged from a year earlier.

Milk production of 1,165 million pounds in 1982 was 1 percent above the previous year. Production per cow in 1982 was 10,495 pounds, a slight increase from 1981 and the third consecutive year that a new record production per cow has been set. The national average production per cow in 1982 was 12,316 pounds.

The average price received by dairy farmers for milk and cream was unchanged from the previous year. Total cash sales reached a record high of \$166 million compared with the previous high of \$164 million in 1981. Producer returns from combined marketings of milk and cream averaged \$14.59 per hundredweight, 90 cents above the national average.

Total milk and cream marketings of 1,135 million pounds in 1982 increased 1 percent from a year earlier. Of the total milk produced during 1982, approximately 97 percent was marketed. Nationally, 98 percent of the total milk produced was sold through milk handling channels. An estimated 30 million pounds of milk were used on Oklahoma farms, an increase of 3 percent from 1981.

The quantity of whole milk (net whole milk equivalent) utilized in manufacturing dairy products totaled 446.0 million pounds in 1982, compared with 452.0 million pounds in 1981.

Production of creamed cottage cheese, at 10.3 million pounds, increased 3 percent from a year earlier. Both cottage cheese curd and lowfat cottage cheese increased from 1981.

Total production of frozen dairy products decreased 2 percent from 1981 to 14.6 million gallons. Ice cream production was 9.6 million gallons, a decrease of 1 percent from 1981. The output of ice milk decreased 7 percent but milk sherbert increased 12 percent. Mellorine production decreased 4 percent to the lowest level since records began in 1952.

POULTRY REVIEW - 1982

The number of chickens, excluding broilers, on Oklahoma farms and ranches on December 1, 1982, totaled 4,700,000 birds, up 12 percent from a year earlier. The average value of non-broiler chickens on December 1, 1982 was \$2.50 per bird, for a total inventory value of \$11,750,000. The annual average number of hens and pullets of laying age was 3,509,000, down slightly from a year earlier. Hens and pullets of laying age averaged 232 eggs per bird during 1982, compared to 237 in 1981.

Egg production during 1982 totaled 814 million eggs, down 3 percent from a year earlier. Of the total number of eggs produced, 98 percent were marketed at an average price of 71.0 cents per dozen, providing \$47,333,000 in cash receipts. Home consumption of eggs was valued at \$828,000, bringing the gross value of egg production to \$48,161,000 for 1982.

A total of 51,170,000 commercial broilers were produced by Oklahoma farmers, up slightly from 1981.

Commercial hatcheries in Oklahoma hatched 1,134,000 egg-type chicks during 1982, a 16 percent decrease from the 1981 hatch.

There were 1,600,000 farm chickens (mostly old hens) sold during the year which averaged 13.0 cents per pound, resulting in sales of \$936,000, down 37 percent from 1981. Home consumption of farm chickens was valued at \$46,000 bringing the total value to \$982,000.

During 1982, a total of 2,055,000 turkeys were raised in Oklahoma, 28 percent more than a year earlier. The average liveweight was 19 pounds per bird which accounts for 39,045,000 pounds of total production. The average price received by producers of 37 cents per pound was unchanged from the previous year. The increase in production resulted in a 28 percent rise in gross income to \$14,447,000.

FARM PRICE REVIEW

The Prices Received Index for all crops averaged 130 percent of the 1977 = 100 base. Winter wheat averaged \$3.65 per bushel for 1982, down 18 cents from 1981's figure. Cottonlint prices increased from 1981 to 47.9 cents per pound, a 17 percent surge. Meanwhile, cottonseed averaged only \$70.00 per ton in 1982, down 17 percent from 1981. Season average prices of other crops, and the changes from 1981 were: grain sorghum, \$4.80 per cwt., up 46 cents; oats, \$2.15, down 15 cents; corn, \$3.00, up 1 cent; barley, \$2.45, down 15 cents; rye, \$2.05, up 5 cents. Soybeans joined the losers, down 50 cents to \$5.20 for the year. Peanuts were off 1.3 cents to 23.4 cents per pound while pecans rose 23.3 cents to 69.0 cents per pound. Alfalfa hay prices ranged from \$88.00 per ton in October and December to a low of \$56.00 in August.

Livestock prices were mixed in 1982 with cattle accounting for most of the decreases. The Index of Livestock and Livestock Products averaged 154 percent of the 1977 = 100 base year. All Beef Cattle dropped for the third consecutive year, down 6 percent to \$54.10 per cwt. Steers and heifers were down 80 cents per cwt, while cows were off \$3.60. Calves under 500 pounds brought \$3.80 per cwt less in 1982. Dairy cow replacements cost \$100 less per head averaging \$1120. Prices received for milk averaged \$14.40 per cwt, unchanged from 1981. Hog prices were better in 1982, ending up at \$50.80 for the year.

Cash receipts from farm marketings totaled \$3.1 billion in 1982, a 9 percent increase from 1981. Cash receipts from sales of crops rose \$1.2 million. Livestock and related products increased \$261 million and accounted for 67 percent of total farm receipts.

Oklahoma farm real estate values continued to rise in 1982, posting a 5 percent increase. The State average value for farmland and buildings amounted to \$696 per acre.

^{1/} Revised. Details may not add to totals due to rounding.

All income derived from farm operations and Government farm programs is included in the above table. The following description of terms may be helpful in interpreting the table:

Cash Receipts from Farm Marketings - Receipts from sales, loans made or guaranteed by CCC and purchases under price support programs.

Government Payments - Those payments made to farmers in connection with programs such as Agricultural Conservation, Feed Grain, Wheat and Cotton, Disaster Payments, etc.

Non-Money Income - Includes the value of farm products consumed directly in farm households and the rental value of housing provided by farm dwellings. Expenses associated with these products and the dwellings are included in the production expense estimates, thus the non-money imputations do not add on a dollar-for-dollar basis to the net.

Realized Gross Farm Income - The sum of the above income sources.

Farm Production Expenses - Cost of current operations including hired labor, repairs, feed, seed, livestock, depreciation on production facilities (excludes new capital equipment, taxes, and rents).

Realized Net Farm Income - Realized gross income minus production expenses.

Net Change in Farm Inventories - Value of change in quantities of crops and livestock products kept on farms from one year to the next (may be a minus value).

Total Net Farm Income - Realized net income plus the net change in inventories.

RELEASE

ANNUAL FEE

OKLAHOMA CROP-WEATHER SUMMARY
(ISSUED: June 6, 1963) (150a-0194-4778)

Issued weekly, except Dec., Jan., Feb., by the Cooperative Extension Service, Oklahoma Dept. of Agriculture, Oklahoma Crop and Livestock Reporting Service, and USDA National Weather Service.

STATE WHEAT HARVEST BEGINS

June 6-wheat harvest in Southwestern, South Central, and East Central Oklahoma has begun. Harvest and wheat moisture is adequate to surplus in all regions. There were 2.6 days available for field work this past week.

WHEAT, OATS, AND BARLEY crops remained in good condition. A few areas in North Central Oklahoma have reported problems with wheat grass to wheat fly. East Central Oklahoma has reported isolated cases of flooding and wind damage. Reports from across the State indicate only isolated damage from hail. Although wheat harvest has begun, it will continue to be 1-2 weeks behind usual harvest dates.

NEW CROP planting made little progress during the week. Sorghum remained second schedule with only 28 percent of the crop planted compared to an average of 50 percent. Cotton plantings remained at 20 percent for the third week in a row with hail rains causing even more fields to require replanting. Field work has been very limited due to wet fields and cool temperatures.

ALFALFA hay remained in good condition, but little harvesting was done this past week. Approximately 30 and 10 percent, respectively, of the first and second cutting were harvested.

Eastern Oklahoma reported increasing problems with tick infestation in cattle. However, livestock are in generally good condition across the State. Isolated reports from all areas of the State indicate some seed problems in established pastures. The cool wet weather of the past week provided excellent conditions for rapid forage growth.

WEEKLY WEATHER FOR WEEK ENDING JUNE 2, 1963: Temperature averages, all for below normal, ranged from 8 degrees below in the East-Central Division to 9 degrees below in the Panhandle. Hottest averages ranged from 20 inches to Southeast to 2.20 inches in the East-Central Division. Significant rainfall amounts included: 4.30 at Jay, Texas; 3.51 at Tahlequah, 4.42 at Tallahassee, 1.67 at Okemah; 1.70 at El Reno. Soil temperatures measured at 4 inches depth ranged from 62 degrees at Okemah to 66 at Tulsa and Tulsa; 64 at Tulsa. Low ranged from 19 degrees at Okemah and Tulsa to 19 degrees at Ada.

Contains weekly summary on progress, status, or happenings relating to crops, livestock and weather.

OKLAHOMA FARM STATISTICS
VOLUME 3, NUMBER 9 MAY 1963

John E. Cochran, State Statistician

WHEAT, OATS, AND BARLEY CROPS

OKLAHOMA: The State's 1963 wheat crop is forecast at 187 million bushels, down 27 percent from last year's record high production. Only 4.4 million acres remain to be harvested, but primarily in Oklahoma's large participation in the PVP program. This is the lowest harvest acreage since 1952. Yields of 36.6 bushels per acre are predicted, matching 1972's record high. The report, based on nearly 2,000 survey responses from Oklahoma farmers, indicates higher yields than last year in nearly all reporting districts. Harvesting moisture, however, is needed to realize maximum yield potential especially in western Oklahoma.

This year's sorghum crop is forecast at 9 million pounds, 6-8 tons at 1962 but 33 percent below 1961's production. Hay stocks on farms are estimated at 476,000 tons, down from 529,000 tons one year ago.

UNITED STATES: Winter wheat production is forecast at 1.89 billion bushels, 10 percent less than last year's record high production of 2.11 billion bushels. Selected states and their production include: Kansas, 424.0 million bushels; Texas, 127.0 million bushels; and Colorado, 80.0 million bushels.

March production in the nine southern states is forecast at 328 million bushels, 41 percent less than last year.
